The Digital MMC Family for Machine, Motion & Servo Control
The Digital MMC Family contains everything you need for a complete, high performance machine and motion control solution.

**Servo Amplifiers** – MMC Smart Drive amplifiers provide 500W to 65kW continuous output power in a compact, easy-to-apply package. Available in 230V single phase and 460V three phase versions, the MMC Smart Drives feature an integral power supply, standard auxiliary feedback, plug and play power and feedback cables to standard Danaher Motion motors.

**Servo Motors** – MMC Smart Drives connect with plug-and-play power and feedback cables to Danaher Motion’s AKM, Goldline DDR and Cartridge DDR motor families. Use Motion Solutions Sizing Software to select a motor and drive combination for your machine’s mechanical configuration.
A complete system solution

**Digital MMC Controls** – The Digital MMC family of controls includes a drive-resident control card for applications up to 16 axes and a stand-alone control for applications up to 64 axes. The drives are daisy-chained to the control card using shielded CAT5 Ethernet cable. Up to 16 drives can be daisy-chained on one network branch.

**PiCPro Software** – PiCPro is used for IEC61131 application program development, and drive setup and tuning. Through a single point connection to the Digital MMC Control, a virtual connection is made to every drive on the Digital network. Use the PiCPro oscilloscope and drive list to monitor and tune the drives on the network. Download parameters and firmware to all drives at once with a single click of the mouse. At the same time, use PiCPro for application program development with IEC61131 ladder logic, function block and structured text languages. PiCPro provides all of the tools you need for high-performance integrated machine and motion control applications.

**Cimrex and Exter HMI** – Use the Cimrex and Exter family of HMI terminals to provide machine status and feedback to the operator. With a complete family of Terminals including compact 2-line displays up to 15” color touch screens, and a tag-name database scheme to communicate to the Digital MMC Controls, these HMI terminals are the final piece to form a complete Digital MMC System.
IEC61131 Application programming
Software with powerful features
PiCPro lets you choose between graphical ladder logic and function block or structured text programming to solve your machine logic and motion control application. Use online edit, animation, forcing and cut-and-paste examples to quickly implement your application. Drive setup and tuning is also integrated into PiCPro. Through a single serial or Ethernet connection, a virtual connection is established to all of the drives on the network.

Expand Via Our Block I/O
Applications that require I/O beyond what is available on the control and the drives are easily expanded using Block I/O. A simple four-wire connection provides access to up to 77 I/O blocks that can be mounted locally or up to 200 feet apart. Select from our family of Block I/O modules including discrete I/O, analog I/O and motion I/O.

User Serial Port Provides Application Flexibility
Whether your application requires a local operator interface or a serial link to another control device, the Digital MMC’s RS232/RS485 serial communications port will make the connection.

CF Disk
Compact Flash disk to store your application program (future).
for applications up to 64 axes

Expansion Capability
The D32 and D64 controls are expandable. Up to four field-installable option modules can be used in a system. Use the 32 Input / 32 Output module to expand the I/O capability beyond what is available on the drives alone. Use the optional DeviceNet or Profibus module to control intelligent I/O devices.

10/100 Ethernet for Device Connectivity
The built-in 10/100 Ethernet port provides a wide variety of connectivity options. Connect to third-party devices using our OPC Server, Modbus TCP or other control protocols, transfer recipe or data files to and from the RAMDISK using TFTP file transfer, share data between controls using UDP packets, and access your plant network. You can also simultaneously run PiCPro over Ethernet either directly or remotely.

Digital Motion Control Network
Daisy-chain up to 16 Digital MMC Smart Drives off each branch with a simple RJ45 connection and readily available CAT5 cable. 230V and 460V versions of the drives are available in power ranges from 500W to 65kW. Real-time data from the drives such as torque, current and fault history is available to the application program over the Digital Link. Download firmware or parameters to all of the drives on the network at once with a single click of the mouse using PiCPro.

User USB
USB Port – Accessible from the application program, this port allows you to communicate with other USB devices (future)

PiCPro USB
USB Port – Allows you to run PiCPro over USB, instead of serially or over Ethernet (future)
PiCPro Drive Setup and Motion Programming
PiCPro provides single point programming for logic, motion, drive commissioning, tuning, process, data management and communications. A virtual connection is established through this single point to allow you to access all of the drives on the network.

Motor Feedback
Use Danaher Motion’s AKM conventional rotary servomotors, or direct drive Goldline DDR or Cartridge DDR motors.

Auxiliary Feedback
Wire your master encoder to this connector for use in master/slave motion applications.

Drive I/O
Each MMC Smart Drive has 8 DC inputs, 4 DC outputs and 1 analog input that can be used in the application program. Two of the inputs are high speed for position capture and registration. The states of the drive I/O are available to the application program over the Digital Network.

Machine Control I/O
Drive-Resident Digital MMC has 8 DC Inputs and 8 DC Outputs for use in your application program. The outputs may be used as PLS outputs.
Digital MMC Controller
Resides inside first Digital MMC Smart Drive. It can control the drive it is installed in and up to 15 additional drives.

Block I/O Options
Applications that require I/O beyond what is available on the control and the drives are easily expanded using Block I/O. A simple four-wire connection provides access to up to 77 I/O blocks that can be mounted locally or up to 200 feet apart. Select from our family of Block I/O modules including discrete I/O, analog I/O and motion I/O.

MMC Multi-Smart Drive Control Scheme
A total of 16 MMC Smart Drives with 16 axes of control can be configured via a simple RJ45 cable connection.

HMI Serial Port Connection
The serial port allows you to connect to our Cimrex and Exter operator interfaces, or a third-party serial device.

10/100 Ethernet for Device Connectivity
The built-in 10/100 Ethernet port provides a wide variety of connectivity options. Connect to third-party devices using our OPC Server, Modbus TCP or other control protocols, transfer recipe or data files to and from the RAMDISK using TFTP file transfer, share data between controls using UDP packets, and access your plant network. You can also simultaneously run PiCPro over Ethernet either directly or remotely.
PiCPro - The Key to

PiCPro - Programming Software

PiCPro - A Single-Point Programming Solution for Total Machine Control

PiCPro offers the most flexible tool set for motion application programming available. Motion instructions are as simple to use as ladder logic counters and timers. Sophisticated functions like multi-tasking provide the headroom to solve the toughest applications.

PiCPro Offers:

• Single-point programming for logic, motion, process, data management and communications.

• Complete ladder logic instruction set to make machine control easy.

• Drive setup and optimized tuning, integrated with application programming.

• Structured text programming for higher level operations.

• Powerful and robust motion instruction set including positioning, indexing, gearing, cam profiling and linear/circular interpolation.

• User-developed instruction (UDFBs) to create programs that can be reused in application after application.

• Powerful diagnostic functions including logic monitoring, data viewing, data forcing, servo tuning, and oscilloscope for quick start-up and maintenance.

• On-line edit of logic and motion to speed application development and troubleshooting.

• Real-time preemptive multi-tasking to solve high performance applications.

• Ethernet TCP/IP support for plant integration and remote application programming and debugging over the internet.

IEC 61131 Application Programming

PiCPro provides ladder logic programming for machine logic control, function block programming for motion control and structured text programming for high level operations, all in a fully-integrated environment. Based on the IEC 61131 standard for programming languages, PiCPro provides a rich standard instruction set with all the tools you’ll need to solve your entire machine and motion control application.

Powerful tools for the application engineer include over 200 standard functions, the ability to develop your own functions as well as time-tick, event-driven and servo-synchronous tasks.

Tools for maintenance include program logic animation, on-line edit of motion and logic instructions, variable forcing, and view lists. Servo tuning and view are built into the PiCPro environment to simplify start-up and maintenance.

Using universally understood ladder logic for machine control complemented by powerful function block programming for motion control, PiCPro provides the simplest yet most powerful tool for solving your motion application.
Successful Motion Control Applications

Single-Point Solution
PiCPro provides a fully-integrated programming environment for your entire application.

Motion Capabilities To Handle Any Application Challenge
PiCPro’s motion control capabilities include positioning, indexing, gearing, cam profiling, and interpolation.

Solve applications such as printing, packaging and converting using the complete master/slave motion instruction set. Sophisticated continuous registration algorithms will adjust your motion profiles providing quality production at all machine speeds. For metal-cutting, welding, pick-and-place and glue-laying, use the interpolated motion instructions.

With up to 64 axes of digital interfaced motion control, PiCPro has the capabilities to solve your application.

Real-Time Multi-Tasking To Solve Your Most Difficult Applications
PiCPro application programs are structured to keep simple applications simple while offering the performance to solve the most challenging problems. True preemptive multi-tasking lets you focus the control’s processing power on your application’s highest priority process. User logic can execute in real-time synchronously with the servo update loop.
Danaher Motion’s MMC Smart Drive servo amplifiers provide 500W to 65kW continuous output power in a compact, easy-to-apply package. Available in both 230VAC and 460VAC systems, MMC Smart Drives operate over wide line voltage range.

Application of MMC Smart Drives is simple. The integral power supply and plug-and-play cable sets simplify installation. Configuration, tuning and maintenance are intuitive using PiCPro software with features including basic and expert parameter views, a software storage oscilloscope and auto-tune.

Use PiCPro’s ladder logic, function block and structured text programming languages to develop complete multi-axis motion control solutions using the Digital MMC Family of Controls.

Operator Interface Terminals

Whatever your application requirements, we have an operator interface terminal that fits.

From economical data entry/display terminals to sophisticated full color graphics touchscreens... all with a rich set of standard functions to make your next application the easiest yet.

Our Operator Interfaces Offer:

- A complete operator interface family ranging from simple text terminals to full color graphics touchscreens.
- Easy-to-use Information Designer configuration software programs both Exter and Cimrex terminals.
- Name-based communications allowing identical tag names in the control and Information Designer.
- Rugged packaging providing IP65 and NEMA 4 environmental ratings.
- A full set of functionality including recipe handling, event scheduling, password protection, report generation and more.
- Networking capability allowing multiple terminals per control... or multiple controls per terminal.
- Dual driver mode letting your operator terminal interface with two different controls per terminal.
- A complete set of standard graphic symbols and the ability to define custom graphics.
- Two families of operator interfaces to address all of your applications.

Exter™ T60c
A compact, full-featured touch screen with a 5.7” display and 320 x 240 pixels.

Exter™ T150
Provides a high-end 15.1” color touch screen with 1024 x 768 pixels.

Exter™ K70
A keypad unit with 6.5”, 640 x 480 pixel resolution display.

Exter™ K100
A keypad unit with 10.4” display and 800 x 600 pixels.
Cimrex 12
A simple data entry/display terminal ideal for basic applications, provides 2 x 20 character backlit LCD display and full keypad for data entry.

Cimrex 20
Provides a 4 x 20 character backlit LCD display and five function keys with slide-in labels.

Cimrex 30
For simpler applications that will benefit from graphics as well as text display with 240 x 64 pixels.

Cimrex 41
A full graphics touchscreen display providing 220 x 240 pixels with built-in ethernet.

Cimrex 60
A full graphics terminal providing 240 x 128 pixels with a bright monochrome display.

Cimrex 67 & 69
An economical gray scale or color graphics touchscreen with a 320 x 240 pixel passive color display and software selectable landscape or portrait display.
